 1 

PERFORMANȚĂ & INTERFATĂ

```
export const routes: Routes = [
  { path: '', redirectTo: 'login', pathMatch: 'full' },
  {
    path: 'login',
    loadComponent: () => import('./features/auth/login/login').then((m) => m.Login),
  },
  {
    path: 'register',
    loadComponent: () => import('./features/auth/register/register').then((m) => m.Register),
  },
  {
    path: 'dashboard',
    canActivate: [authGuard],
    loadComponent: () => import('./features/dashboard/dashboard').then((m) => m.Dashboard),
  },
  { path: '**', redirectTo: 'login' },
];
```

- UI/UX: Componente NgZorro (Formulare, Tabele, Modale, Popconfirm)
- Performanță: Arhitectură Fully Lazy Loaded

AUTENTIFICARE & SECURITATE

Validarea datelor

```
private initForm(): void {
  this.registerForm = this.fb.group({
    firstName: ['', [Validators.required]],
    lastName: ['', [Validators.required]],
    email: ['', [Validators.required, Validators.email], [this.emailAsyncValidator]],
    password: ['', [Validators.required, passwordValidator()]],
    confirmPassword: ['', [Validators.required]],
  }, {
    validators: [this.passwordMatchValidator]
  });
}
```

Managementul sesiunii

```
const tokenValue = 'local-token-' + users[0].id;
if (remember) {
  localStorage.setItem('token', tokenValue);
} else {
  sessionStorage.setItem('token', tokenValue);
}
```

```
export const authGuard: CanActivateFn = () => {
  const router = inject(Router);

  const token = localStorage.getItem('token') || sessionStorage.getItem('token');

  if (token) {
    return true;
  } else {
    router.navigate(['/login']);
    return false;
  }
};
```

Rută protejată

```
loadProjects() {  
  const userId = this.getUserId();  
  if (userId) {  
    this.http.get<Project[]>(`${this.apiUrl}?userId=${userId}`).subscribe({  
      next: (data) => this.projectsSignal.set(data),  
      error: (err) => console.error('Error fetching projects', err)  
    });  
  }  
}
```

ARHITECTURA DATELOR

- Comunicare RESTful: Servicii Angular (@Injectable)
- Operațiuni Complete (Bonus): CRUD (GET, POST, PUT, DELETE)
- Backend: Fake API localizat (json-server)

REACTIVITATE & COMUNICARE

- Comunicare Părinte-Copil: `@Input()` și `@Output()` (ex: `StatusBadge`)
- State Management modern: Angular Signals (`signal`, `computed`)
- Filtrare dinamică: Tabel actualizat în timp real, fără re-randări inutile

```
searchTerm = signal('');
statusFilter = signal('All');
priorityFilter = signal('All')

filteredProjects = computed(() => {
  const term = this.searchTerm().toLowerCase();
  const status = this.statusFilter();
  const priority = this.priorityFilter();
  const allProjects = this.projectService.projects();

  return allProjects.filter(p => {
    const matchesSearch = p.name.toLowerCase().includes(term)
    || p.description.toLowerCase().includes(term);
    const matchesStatus = status === 'All' || p.status === status;
    const matchesPriority = priority === 'All' || p.priority === priority;
    return matchesSearch && matchesStatus && matchesPriority;
  });
});
```

RAPORTARE

- Generare Rapoarte: Integrare jsPDF și jspdf-autotable
- Export Dinamic: Conținutul PDF-ului se adaptează filtrelor aplicate

```
exportToPDF(): void {  
  const doc = new jsPDF();  
  
  doc.setFontSize(18);  
  doc.setTextColor(255, 77, 133);  
  doc.text('Task Tracker - Project Report', 14, 15);  
  
  const tableData = this.filteredProjects().map(p => [  
    p.name,  
    p.description,  
    new Date(p.deadline).toLocaleDateString(),  
    p.status,  
    p.priority  
  ]);  
}
```
